SUMMARY

Product engineer with 10+ years owning end-to-end delivery across React, Node.js, Python, AWS, and measurable product outcomes including conversion and performance. Selected impact includes 25% conversion lift, 50M+ user-scale systems, 60% system performance improvement, 3x throughput improvement. Strengths include full-stack product delivery, experimentation, conversion improvements, and end-to-end ownership from UI through APIs.

TECHNICAL SKILLS

Product Delivery: conversion optimization

Full Stack: React, Next.js, Node.js, Python, TypeScript, REST, GraphQL

Data & Cloud: PostgreSQL, Redis, AWS, Docker, CI/CD

Delivery Quality: Feature flags, production monitoring, regression gates, performance tuning

EXPERIENCE

Product Engineer | 2026 – Present

Happening Today

- Own full-stack product delivery for real-time streaming (Server-Sent Events + Node.js): ideate, prototype, and ship high-volume response paths with backpressure, request budgets, and graceful fallbacks when payload limits overflow.
- Ship fast in tight loops — release streaming and API improvements weekly while regression gates, release suites, and CloudWatch latency/cost dashboards protect user-visible quality.
- Experiment on request budgets, fallback behavior, and load patterns to improve reliability and user impact before each production cut.
- Partner cross-functionally on platform ops — Git-backed config versioning, automated quality checks, and regression-rate alerting — so product and engineering stay aligned on what ships.

Product Engineer | 2024 – 2025

MIRA

- Delivered full-stack product features for 50M+ users end-to-end — production search and content over proprietary catalogs via indexing, service orchestration, and managed APIs shaped for user-facing outcomes.
- Shipped iteratively with CI/CD regression gates and fast experiment cycles to catch deployment regressions before release and keep product surfaces stable at scale.
- Built and scaled backend services powering core product workflows — decomposing complex retrieval into shippable increments with monitoring tied to user impact.
- Worked cross-functionally across search, content, and platform teams to align API contracts, indexing changes, and release timing with product priorities.

Technical Lead / Senior Product Engineer | 2022 – 2024

Delta Exchange

- Built a React component library and shared state management layer, cutting UI feature development time significantly and boosting conversion by 25%.
- Led technical debt reduction initiative: migrated critical services from callback-heavy Node to async/await patterns, reducing bug rate by 40%.
- Designed and built core trading engine features for a real-time derivatives platform serving 5M+ users — Order book rendering, WebSocket feed management, and margin calculation APIs.
- Refactored legacy service architecture to reduce inter-service latency, achieving a 60% system performance improvement measured end-to-end.

Product Software Engineer | 2019 – 2022

BetterPlace

- Built scalable SaaS modules (workforce management, compliance workflows) using React, Python (Django/Flask), and Node.js.
- Designed a batched data ingestion pipeline that increased system throughput by 3x, enabling the platform to onboard enterprise clients with large worker datasets.
- Introduced frontend performance patterns (lazy loading, memoisation, pagination) that reduced UI render times by 50%.
- Migrated monolith features to independently deployable microservices, improving deployment frequency and reducing rollback risk.

Software Developer | 2015 – 2019

Liftoff Pvt Ltd & Daffodils Software

- Delivered full stack features across web applications in early-career roles.
- Integrated third-party services, and shipped React/Angular frontend modules.
- Built REST APIs.
