SUMMARY

Senior full stack engineer with 10+ years building AI, fintech, and SaaS systems across React, Node.js, Python, TypeScript, AWS, distributed systems, and production monitoring. Selected impact includes 50M+ user-scale systems, 60% system performance improvement, 3x throughput improvement, 35% inference cost reduction. Strengths include React, Node.js, Python, TypeScript, AWS, APIs, microservices, microfrontends architecture, data pipelines, and production platforms.

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, JavaScript, Python, Node.js, React, Next.js, Django, Flask, REST, GraphQL

Frontend Architecture: microfrontends, independently deployable UI packages, shared component libraries, module boundaries, design-system integration

Infrastructure: AWS, Docker, Kubernetes, CI/CD, Terraform

Data: PostgreSQL, Redis, MongoDB, Elasticsearch, Kafka, RabbitMQ

EXPERIENCE

Senior Full Stack Engineer | 2026 – Present

Happening Today

- Own end-to-end delivery of the production platform stack—React/Node.js services, REST APIs, and AWS observability (CloudWatch) with Git-versioned configuration, automated regression checks, and latency/cost alerting.
- Built a high-throughput streaming API in Node.js (Server-Sent Events) for product responses—backpressure, request budgets, and graceful fallback when payloads exceed limits.
- Defined microservices and microfrontend-style boundaries so React UI packages and Node.js APIs could deploy independently without increasing rollback risk.
- Partner with product and engineering to validate new capabilities end-to-end—from design through staging checks to production release.

Senior Software Engineer | 2024 – 2025

MIRA

- Built and scaled backend microservices and REST APIs powering product features for 50M+ users—including a production search and content platform with indexing, orchestration, and managed response APIs (Python/Node.js).
- Owned high-scale features end-to-end—from API contracts and data pipelines through production validation, performance tuning, and on-call readiness.
- Integrated CI/CD regression gates to catch deployment regressions before release and protect microservices deployments.
- Collaborated across React product surfaces and backend owners to ship search and content experiences with clear module boundaries and independently testable APIs.

Technical Lead / Senior Full Stack Engineer | 2022 – 2024

Delta Exchange

- Led technical debt reduction initiative: migrated critical services from callback-heavy Node to async/await patterns, reducing bug rate by 40%.
- Built a React component library and shared state management layer, cutting UI feature development time significantly and boosting conversion by 25%.
- Designed and built core trading engine features for a real-time derivatives platform serving 5M+ users — Order book rendering, WebSocket feed management, and margin calculation APIs.
- Refactored legacy service architecture to reduce inter-service latency, achieving a 60% system performance improvement measured end-to-end.

Full Stack Engineer | 2019 – 2022

BetterPlace

- Built scalable SaaS modules (workforce management, compliance workflows) using React, Python (Django/Flask), and Node.js.
- Introduced frontend performance patterns (lazy loading, memoisation, pagination) that reduced UI render times by 50%.
- Designed a batched data ingestion pipeline that increased system throughput by 3x, enabling the platform to onboard enterprise clients with large worker datasets.
- Migrated monolith features to a microfrontends architecture — independently deployable React apps, shared component packages, and backing microservices — improving deployment frequency and reducing rollback risk.

Software Developer | 2015 – 2019

Liftoff Pvt Ltd & Daffodils Software

- Integrated third-party services, and shipped React/Angular frontend modules.
- Delivered full stack features across web applications in early-career roles.
- Built REST APIs.
