SUMMARY

UI architect and senior frontend leader with 10+ years shaping design systems, React/TypeScript platforms, real-time product UX, and measurable interface performance at scale. Selected impact includes 50% UI render-time reduction, 25% conversion lift, 50M+ user-scale systems, 60% system performance improvement. Strengths include design systems, UI architecture, React/TypeScript platforms, accessibility-minded patterns, and performance-tuned product interfaces.

TECHNICAL SKILLS

UI Architecture: Design systems, component libraries, UX patterns, design tokens

Frontend Engineering: React, Next.js, TypeScript, JavaScript, WebSockets, performance optimization, conversion-focused UX

Collaboration: design-to-code standards, cross-functional product delivery

Platform: Node.js, Python, AWS, CI/CD, monitoring

EXPERIENCE

UI Architect | 2026 – Present

Happening Today

- Leading design system and component architecture for real-time product surfaces — reusable React/TypeScript primitives, design tokens, and cross-team UI standards for high-volume Server-Sent Events flows.
- Shaping information architecture (IA) for streaming discovery and response UX — navigation hierarchy, content models, and layout patterns with graceful degradation on backpressure and payload limits.
- Defining design-to-code and accessibility standards (semantic markup, focus order, contrast) so product, design, and engineering ship consistent, WCAG-minded interfaces before release.
- Operating the design system release loop: Git-versioned tokens/config, CI regression gates, CloudWatch latency dashboards, and alerting on UI consistency and adoption regressions.

Frontend Architect | 2024 – 2025

MIRA

- Built and scaled component architecture and design system foundations for 50M+ user product features — shared libraries, design tokens, and documentation driving cross-team adoption.
- Defined cross-team UI standards and information architecture for content and discovery — consistent navigation models, module patterns, and layouts across search-indexed, orchestrated experiences.
- Integrated design-to-code and accessibility regression gates in CI/CD — catching component API drift, visual inconsistency, and a11y violations before production release.
- Partnered with design and engineering on design system implementation — mapping specs to production React surfaces and managed APIs while preserving performance at scale.

Frontend Technical Lead | 2022 – 2024

Delta Exchange

- Built a React component library and shared state management layer, cutting UI feature development time significantly and boosting conversion by 25%.
- Designed and built core trading engine features for a real-time derivatives platform serving 5M+ users — Order book rendering, WebSocket feed management, and margin calculation APIs.
- Refactored legacy service architecture to reduce inter-service latency, achieving a 60% system performance improvement measured end-to-end.
- Led technical debt reduction initiative: migrated critical services from callback-heavy Node to async/await patterns, reducing bug rate by 40%.

Senior Frontend Engineer | 2019 – 2022

BetterPlace

- Built scalable SaaS modules (workforce management, compliance workflows) using React, Python (Django/Flask), and Node.js.
- Designed a batched data ingestion pipeline that increased system throughput by 3x, enabling the platform to onboard enterprise clients with large worker datasets.
- Introduced frontend performance patterns (lazy loading, memoisation, pagination) that reduced UI render times by 50%.
- Migrated monolith features to independently deployable microservices, improving deployment frequency and reducing rollback risk.

Software Developer | 2015 – 2019

Liftoff Pvt Ltd & Daffodils Software

- Integrated third-party services, and shipped React/Angular frontend modules.
- Delivered full stack features across web applications in early-career roles.
- Built REST APIs.
