SUMMARY

Cloud architect with 10+ years designing AWS-native platforms, migration paths, reliability patterns, and cost-aware infrastructure for SaaS workloads. Selected impact includes 50M+ user-scale systems, 60% system performance improvement, 3x throughput improvement, 40% bug-rate reduction. Strengths include AWS architecture, VPC networking, migration planning, reliability and scalability patterns, cost-aware infrastructure, and security-conscious cloud platforms.

TECHNICAL SKILLS

Cloud Architecture: AWS, VPC design, multi-region patterns, cost optimization

Platform: Kubernetes, Docker, Terraform, CI/CD

Applications: Microservices, APIs, event streaming, PostgreSQL, Redis, Kafka

Operations: cost governance

EXPERIENCE

Cloud Architect | 2026 – Present

Happening Today

- Architecting AWS production platforms with Git-versioned IaC, Terraform-aligned CI/CD, and CloudWatch dashboards for latency, cost allocation, and high-availability regression alerting.
- Establishing landing-zone-style environment governance — structured dev/stage/prod separation, IAM-scoped access, and automated security checks before release.
- Designing cloud-native, highly available streaming APIs (Server-Sent Events on Node.js) with backpressure controls, request budgets, and graceful degradation under peak load.
- Optimizing AWS cost and resilience — right-sized compute, consolidated observability, and release automation aligned to disaster-recovery-ready operations.

Cloud Platform Engineer | 2024 – 2025

MIRA

- Delivered cloud-native architecture for 50M+ user workloads — VPC-bound microservices, managed AWS APIs, and security-conscious service boundaries at scale.
- Implemented IaC and CI/CD regression gates (Terraform/Git) to catch infrastructure drift and deployment regressions before production.
- Built high-availability search and content pipelines with indexed orchestration and right-sized compute, improving throughput while controlling AWS cost.
- Applied AWS security best practices in delivery — least-privilege IAM, pre-release validation, and compliance-minded change controls for production releases.

Technical Lead / Senior Platform Engineer | 2022 – 2024

Delta Exchange

- Refactored legacy service architecture to reduce inter-service latency, achieving a 60% system performance improvement measured end-to-end.
- Designed and built core trading engine features for a real-time derivatives platform serving 5M+ users — Order book rendering, WebSocket feed management, and margin calculation APIs.
- Built a React component library and shared state management layer, cutting UI feature development time significantly and boosting conversion by 25%.
- Led technical debt reduction initiative: migrated critical services from callback-heavy Node to async/await patterns, reducing bug rate by 40%.

Backend and Cloud Engineer | 2019 – 2022

BetterPlace

- Built scalable SaaS modules (workforce management, compliance workflows) using React, Python (Django/Flask), and Node.js.
- Designed a batched data ingestion pipeline that increased system throughput by 3x, enabling the platform to onboard enterprise clients with large worker datasets.
- Introduced frontend performance patterns (lazy loading, memoisation, pagination) that reduced UI render times by 50%.
- Migrated monolith features to independently deployable microservices, improving deployment frequency and reducing rollback risk.

Software Developer | 2015 – 2019

Liftoff Pvt Ltd & Daffodils Software

- Delivered full stack features across web applications in early-career roles.
- Built REST APIs.
- Integrated third-party services, and shipped React/Angular frontend modules.
