

RACHIT SRIVASTAVA

Engineering Manager

Bengaluru, India

+91-8168433423 · rachit.srivastava1994@gmail.com · linkedin.com/in/rachitsrivas · github.com/rachit1994

SUMMARY

Engineering leadership profile with 10+ years of hands-on software delivery, tech lead experience, technical debt reduction, system modernization, and cross-functional product execution. Selected impact includes 40% bug-rate reduction, 60% system performance improvement, 50M+ user-scale systems, 25% conversion lift. Strengths include team leadership, roadmap delivery, technical leadership, mentoring engineers, delivery ownership, technical debt reduction, platform quality, and cross-functional product execution.

TECHNICAL SKILLS

Engineering Leadership: code review, technical debt reduction

Architecture: Distributed systems, platform modernization, performance, API design

Stack Fluency: React, Node.js, Python, TypeScript, AWS, PostgreSQL, Redis, Kafka

EXPERIENCE

Engineering Manager | 2026 – Present

Happening Today

- Lead full-stack platform delivery for high-volume product APIs — Own roadmap execution, cross-functional alignment with product, and release quality for a streaming layer (Server-Sent Events + Node.js) with backpressure, request budgets, and graceful fallback.
- Direct engineering execution across parallel workstreams — Plan and assign platform work, coordinate implementation, and hold the team to CI/CD regression gates, structured Git-based configuration, and CloudWatch latency/cost dashboards with quality regression alerting.
- Grow engineers through coaching and hiring — Interview and onboard talent, mentor on production operations and architectural tradeoffs, and raise the bar on code review, automated regression, and incident-ready releases.
- Partner cross-functionally on multi-quarter commitments — Translate roadmap priorities into sprint-ready deliverables, communicate delivery targets and progress, and drive operational excellence across fast-turn and platform initiatives.

Engineering Manager / Delivery Lead | 2024 – 2025

MIRA

- Owned delivery accountability for backend services at 50M+ user scale — Led engineers through search and content platform delivery, sprint planning, and release cadence with product and data partners.
- Built people leadership on the team — Coached engineers via code review and mentoring, integrated CI/CD regression gates before release, and enforced technical quality across service design and deployments.
- Led cross-functional execution on the engineering roadmap — Aligned priorities with product on indexing, orchestration, and managed-API rollouts across concurrent feature workstreams and multi-quarter initiatives.
- Supported hiring and team capacity for delivery — Scoped roles, interviewed candidates, and onboarded engineers into production search, service orchestration, and high-scale content systems.

Team Lead / Senior Software Engineer | 2022 – 2024

Delta Exchange

- Refactored legacy service architecture to reduce inter-service latency, achieving a 60% system performance improvement measured end-to-end.
- Led technical debt reduction initiative: migrated critical services from callback-heavy Node to async/await patterns, reducing bug rate by 40%.
- Designed and built core trading engine features for a real-time derivatives platform serving 5M+ users — Order book rendering, WebSocket feed management, and margin calculation APIs.
- Built a React component library and shared state management layer, cutting UI feature development time significantly and boosting conversion by 25%.

Senior Software Developer | 2019 – 2022

BetterPlace

- Built scalable SaaS modules (workforce management, compliance workflows) using React, Python (Django/Flask), and Node.js.
- Designed a batched data ingestion pipeline that increased system throughput by 3x, enabling the platform to onboard enterprise clients with large worker datasets.
- Introduced frontend performance patterns (lazy loading, memoisation, pagination) that reduced UI render times by 50%.
- Migrated monolith features to independently deployable microservices, improving deployment frequency and reducing rollback risk.

Software Developer | 2015 – 2019

Liftoff Pvt Ltd & Daffodils Software

- Delivered full stack features across web applications in early-career roles.
- Built REST APIs.
- Integrated third-party services, and shipped React/Angular frontend modules.
