

RACHIT SRIVASTAVA

Forward Deployed Engineer

Bengaluru, India

+91-8168433423 · rachit.srivastava1994@gmail.com · linkedin.com/in/rachitsrivas · github.com/rachit1994

SUMMARY

Forward deployed engineer profile combining senior full stack execution, API integrations, AI workflow implementation, and production ownership. Selected impact includes 50M+ user-scale systems, sub-200ms retrieval targets, 3x throughput improvement, 25% conversion lift. Strengths include customer-facing deployments, stakeholder discovery, integration prototypes, workflow automation, full-stack delivery, live API tool use, third-party integrations, and production ownership.

TECHNICAL SKILLS

Full Stack: React, Node.js, Python, TypeScript, REST, GraphQL

Cloud: AWS, Docker, CI/CD, PostgreSQL, Redis

EXPERIENCE

Forward Deployed Engineer | 2026 – Present

Happening Today

- Leading customer deployment of a streaming API layer (Server-Sent Events + Node.js) for high-volume product responses — stakeholder-facing scoping, go-live execution, and production integration with backpressure, request budgets, and graceful fallback on payload limits.
- Driving rapid delivery in the field: tight feedback loops on latency and reliability with product and platform partners to improve fit before each release.
- Owning production integration for the platform ops stack — Git-versioned configuration, automated regression gates, release regression suite, and CloudWatch latency/cost dashboards with quality regression alerting.
- Acting as primary technical point of contact for deployment readiness — translating integration constraints into business outcomes and shipping end-to-end solution delivery under production load.

Solutions Engineer | 2024 – 2025

MIRA

- Owned production integration for backend services at 50M+ user scale — search indexing, service orchestration, and managed APIs wired to customer content systems and third-party data sources.
- Delivered end-to-end solution delivery for a production search and content platform — rapid iteration with field feedback to improve retrieval quality and stakeholder-facing feature fit.
- Built and maintained production-grade services (APIs, orchestration, indexing) that scaled with usage complexity across high-traffic product surfaces.
- Embedded stakeholder-facing engineering in release workflow — regression gates in CI/CD to catch deployment regressions before customer-facing go-live.

Technical Lead / Senior Product Engineer | 2022 – 2024

Delta Exchange

- Designed and built core trading engine features for a real-time derivatives platform serving 5M+ users — Order book rendering, WebSocket feed management, and margin calculation APIs.
- Refactored legacy service architecture to reduce inter-service latency, achieving a 60% system performance improvement measured end-to-end.
- Built a React component library and shared state management layer, cutting UI feature development time significantly and boosting conversion by 25%.
- Led technical debt reduction initiative: migrated critical services from callback-heavy Node to async/await patterns, reducing bug rate by 40%.

Product Integration Engineer | 2019 – 2022

BetterPlace

- Built scalable SaaS modules (workforce management, compliance workflows) using React, Python (Django/Flask), and Node.js.
- Designed a batched data ingestion pipeline that increased system throughput by 3x, enabling the platform to onboard enterprise clients with large worker datasets.
- Introduced frontend performance patterns (lazy loading, memoisation, pagination) that reduced UI render times by 50%.
- Migrated monolith features to independently deployable microservices, improving deployment frequency and reducing rollback risk.

Software Developer | 2015 – 2019

Liftoff Pvt Ltd & Daffodils Software

- Built REST APIs.
- Delivered full stack features across web applications in early-career roles.
- Integrated third-party services, and shipped React/Angular frontend modules.
