SUMMARY

Hands-on solutions architect and senior engineer with 10+ years designing scalable SaaS, fintech, cloud, and integration architectures. Selected impact includes 50M+ user-scale systems, 60% system performance improvement, 3x throughput improvement, 40% bug-rate reduction. Strengths include customer-facing solution discovery, system design, API and integration architecture, cloud-backed platforms, scalable production systems, and implementation planning.

TECHNICAL SKILLS

Architecture: System design, distributed systems, API design, integration architecture

Cloud & Data: AWS, Docker, Kubernetes, PostgreSQL, Redis, Kafka, Elasticsearch

Integrations: Third-party APIs, event-driven workflows

EXPERIENCE

Solutions Architect | 2026 – Present

Happening Today

- Lead customer-facing solution architecture for the production platform—translating product and reliability requirements into scalable integration designs (streaming APIs, SSE + Node.js) with backpressure, request budgets, and graceful degradation under load.
- Define end-to-end architecture for high-volume response paths: API contracts, service boundaries, and observability patterns so delivery teams can build operable, maintainable releases aligned to architectural intent.
- Provide pre-sales-through-delivery technical leadership on platform operations—Git-backed configuration versioning, automated regression gates, CloudWatch latency/cost dashboards, and quality regression alerting across the release lifecycle.
- Partner with product and engineering on discovery and implementation planning—communicating architectural trade-offs, risks, and rollout recommendations for secure, reliable, long-term scalable solutions.

Senior Solutions Engineer | 2024 – 2025

MIRA

- Served as senior, client-scale solutions architect—designing scalable platform services and integration layers for 50M+ users, including production search/content systems with search indexing, orchestration, and managed API response paths.
- Defined integration architecture across indexing pipelines, service orchestration, and third-party/managed APIs—establishing patterns for throughput, reliability, and clear boundaries between platform components.
- Drove solution design from requirements through execution—embedding CI/CD regression gates and architectural oversight so quality and scalability commitments defined upfront carried through production delivery.
- Collaborated with cross-functional stakeholders on technical discovery and delivery enablement—translating feature objectives into pragmatic, implementable architectures with measurable performance outcomes.

Technical Lead / Senior Software Engineer | 2022 – 2024

Delta Exchange

- Refactored legacy service architecture to reduce inter-service latency, achieving a 60% system performance improvement measured end-to-end.
- Designed and built core trading engine features for a real-time derivatives platform serving 5M+ users — Order book rendering, WebSocket feed management, and margin calculation APIs.
- Built a React component library and shared state management layer, cutting UI feature development time significantly and boosting conversion by 25%.
- Led technical debt reduction initiative: migrated critical services from callback-heavy Node to async/await patterns, reducing bug rate by 40%.

Integration Software Engineer | 2019 – 2022

BetterPlace

- Built scalable SaaS modules (workforce management, compliance workflows) using React, Python (Django/Flask), and Node.js.
- Designed a batched data ingestion pipeline that increased system throughput by 3x, enabling the platform to onboard enterprise clients with large worker datasets.
- Introduced frontend performance patterns (lazy loading, memoisation, pagination) that reduced UI render times by 50%.
- Migrated monolith features to independently deployable microservices, improving deployment frequency and reducing rollback risk.

Software Developer | 2015 – 2019

Liftoff Pvt Ltd & Daffodils Software

- Built REST APIs.
- Delivered full stack features across web applications in early-career roles.
- Integrated third-party services, and shipped React/Angular frontend modules.
