SUMMARY

Staff-level engineer and technical lead with 10+ years designing distributed systems, leading technical direction, reducing latency, and shipping measurable product outcomes. Selected impact includes 60% system performance improvement, 40% bug-rate reduction, 50M+ user-scale systems, 25% conversion lift. Strengths include technical direction, distributed systems design, latency reduction, platform quality, mentorship, and measurable product outcomes.

TECHNICAL SKILLS

Technical Leadership: Architecture, system design, code review

Systems: Distributed systems, high-concurrency systems, performance profiling

Stack: React, Node.js, Python, TypeScript, AWS, PostgreSQL, Redis, Kafka

EXPERIENCE

Staff Engineer | 2026 – Present

Happening Today

- Set technical direction for production platform operations — Git-backed configuration versioning, org-wide automated regression gates, CloudWatch latency/cost dashboards, and quality regression alerting adopted across engineering teams.
- Architected and delivered a complex distributed streaming layer (Server-Sent Events + Node.js) for high-volume product responses — backpressure controls, request budget management, and graceful degradation on payload limits.
- Drove platform-wide improvements to reliability and technical debt: standardized deploy regression suites and observability patterns that reduced cross-team incident churn and raised engineering excellence bar.
- Mentored engineers on operational ownership, secure release workflows, and performance debugging — influencing peers and multiplying team impact on complex backend issues.

Lead Software Engineer | 2024 – 2025

MIRA

- Shaped architectural decisions and org-wide delivery standards by embedding regression gates in CI/CD — blocking deployment regressions before release and aligning multiple teams on shared quality bars.
- Built and scaled complex distributed backend services for 50M+ users — production search and content platform with indexing pipelines, service orchestration, and managed API integrations.
- Partnered with product and cross-functional stakeholders to define technical direction, scope platform initiatives, and deliver high-impact features with measurable product outcomes.
- Mentored engineers on service design, test automation, and CI practices — coaching peers through ambiguous problem spaces and elevating team practices org-wide.

Technical Lead / Senior Software Engineer | 2022 – 2024

Delta Exchange

- Designed and built core trading engine features for a real-time derivatives platform serving 5M+ users — Order book rendering, WebSocket feed management, and margin calculation APIs.
- Refactored legacy service architecture to reduce inter-service latency, achieving a 60% system performance improvement measured end-to-end.
- Built a React component library and shared state management layer, cutting UI feature development time significantly and boosting conversion by 25%.
- Led technical debt reduction initiative: migrated critical services from callback-heavy Node to async/await patterns, reducing bug rate by 40%.

Senior Software Engineer | 2019 – 2022

BetterPlace

- Designed a batched data ingestion pipeline that increased system throughput by 3x, enabling the platform to onboard enterprise clients with large worker datasets.
- Built scalable SaaS modules (workforce management, compliance workflows) using React, Python (Django/Flask), and Node.js.
- Introduced frontend performance patterns (lazy loading, memoisation, pagination) that reduced UI render times by 50%.
- Migrated monolith features to independently deployable microservices, improving deployment frequency and reducing rollback risk.

Software Developer | 2015 – 2019

Liftoff Pvt Ltd & Daffodils Software

- Delivered full stack features across web applications in early-career roles.
- Built REST APIs.
- Integrated third-party services, and shipped React/Angular frontend modules.
