SUMMARY

Technical lead with 10+ years leading delivery teams, mentoring engineers, driving architecture decisions, and shipping React, Node.js, Python, and AWS platforms. Selected impact includes 40% bug-rate reduction, 60% system performance improvement, 25% conversion lift, 50M+ user-scale systems. Strengths include team technical leadership, delivery execution, code quality, mentoring, and hands-on architecture across the stack.

TECHNICAL SKILLS

Technical Leadership: code review, cross-functional execution

Engineering: React, Node.js, Python, TypeScript, REST, GraphQL, distributed systems

Platform Quality: Technical debt reduction, performance, CI/CD

EXPERIENCE

Tech Lead | 2026 – Present

Happening Today

- Set technical direction for the product platform — Own architecture decisions for a streaming API layer (Server-Sent Events + Node.js), including backpressure, request budgets, and graceful degradation on payload limits.
- Drive planning, prioritization, and delivery execution — Ship production features with structured release planning, automated regression checks, and release regression suites before every deploy.
- Uphold code quality and operational reliability — Run Git-versioned configuration, CloudWatch latency/cost dashboards, and quality-regression alerting tied to measurable production outcomes.
- Provide team technical leadership and mentoring — Lead design reviews, unblock engineers on complex integration problems, and raise the bar on production-grade Node.js patterns.

Lead Software Engineer | 2024 – 2025

MIRA

- Contributed to architecture decisions for scalable backends — Built and scaled services powering product features for 50M+ users, including search indexing, orchestration, and managed API response paths.
- Enforced code quality through CI/CD delivery gates — Integrated regression checks to catch deployment regressions before release and protect production stability.
- Stayed hands-on writing and deploying production-grade code — Designed, built, and delivered platform features with maintainable APIs and reliable service behavior under load.
- Mentored engineers and improved developer experience — Reviewed designs, coached teammates through complex problems, and helped engineers make clearer technical tradeoffs on delivery.

Technical Lead / Senior Software Engineer | 2022 – 2024

Delta Exchange

- Refactored legacy service architecture to reduce inter-service latency, achieving a 60% system performance improvement measured end-to-end.
- Designed and built core trading engine features for a real-time derivatives platform serving 5M+ users — Order book rendering, WebSocket feed management, and margin calculation APIs.
- Built a React component library and shared state management layer, cutting UI feature development time significantly and boosting conversion by 25%.
- Led technical debt reduction initiative: migrated critical services from callback-heavy Node to async/await patterns, reducing bug rate by 40%.

Senior Software Engineer | 2019 – 2022

BetterPlace

- Built scalable SaaS modules (workforce management, compliance workflows) using React, Python (Django/Flask), and Node.js.
- Designed a batched data ingestion pipeline that increased system throughput by 3x, enabling the platform to onboard enterprise clients with large worker datasets.
- Introduced frontend performance patterns (lazy loading, memoisation, pagination) that reduced UI render times by 50%.
- Migrated monolith features to independently deployable microservices, improving deployment frequency and reducing rollback risk.

Software Developer | 2015 – 2019

Liftoff Pvt Ltd & Daffodils Software

- Delivered full stack features across web applications in early-career roles.
- Built REST APIs.
- Integrated third-party services, and shipped React/Angular frontend modules.
